1. Things That Went Well

During this sprint, we were able to get a new member that did work and we were able to add extra functionalities for the employee in the front end which were delete and edit employee. In this sprint as well, booking page bugs were also fixed. Members took initiative and contributed to their parts.

2. Things That Could Have Gone Better

More detailed plan on the steps of what needs to be done to work on implementation of the functionality.

3. Things That Surprised Us

Difficulty in setting up cloud infrastructure and simplicity of springboot with how everything can be abstracted.

4. Lessons Learned

Learnt about how to use react as frontend and axios to link to the backend. Also learnt how to use the AWS for deployment. Most importantly, the need for constant communication and arrangement of the tasks on the notion.

5. Final Thoughts

Overall throughout this whole project we found that at the beginning we had great team work and all the tasks were completed. However, we began to fall behind and there were members that dropped the course. Despite this, we were able to pick up on what we wanted to focus on and tried our best with that. As a new member came and did the work, it really helped the team a lot to get some bugs fixed especially for the front end. In this project we learnt new tools and also understood the importance of communication and having team members that actually work.
